	/Vy Q. Bui/ Primary Examiner, Art U	nit 3773	

Continuation of 11. does NOT place the application in condition for allowance because: Kleshinski-162 filter device is actuable between a radially colapsed configuration (when the filter is constrained in a catheter for navigation along a tortuous blood vessel, for example), a centering configuration defined by filter legs 22 (F 1), and a filtering configuration as defined by filter legs 22 (F 1).

The present invention appears to disclose three mutually exclusive configurations: radially collapsed configuration in catheter 36 (F.5), centering configuration (F.6) when the filter is first deployed, and filtering configuration (F.7) when the filter is anchoring to the blood vessel for a long term filtering of a blood flow.

However, the claim languages of the present invention do not exclude the case when the centering configuration defined by filter legs 20 of Kleshinski-162) and filtering configuration defined by filter legs 22 of Kleshinski-162 co-exist in a blood vessel.
